

MAHESH KONAR

Backend Engineer – Node.js | TypeScript | MongoDB | AWS

Mumbai, India – +91 91378 26216 – konartech@gmail.com

Portfolio: mahesh-portfolio-29e.pages.dev – LinkedIn: [maheshk86000](https://www.linkedin.com/in/maheshk86000) – GitHub: [maheshkonar8](https://github.com/maheshkonar8)

Summary

Backend Engineer with 2.5+ years building and scaling production Node.js/TypeScript services. Own the backend of a consumer platform serving **90K+ registered users (22K MAU)** across web, Android, and iOS – REST API design, MongoDB/Redis data layer, Dockerized deployments with CI/CD behind Nginx, and AWS (S3, CloudFront) infrastructure. Strong in system design (HLD/LLD), caching, and API performance.

Technical Skills

- **Languages:** TypeScript, JavaScript (Node.js), SQL, NoSQL, familiar: Java, Python, C#/.NET
- **Backend:** Node.js, Express.js, REST API design & versioning, Socket.IO, webhooks, rate limiting, job schedulers, queues/workers, async & concurrent processing
- **Databases & Caching:** MongoDB (Atlas), Mongoose, schema design, compound indexes, aggregation pipelines, pagination/search, PostgreSQL, Redis
- **DevOps & Cloud:** Docker, CI/CD (GitHub Actions), Nginx (reverse proxy, SSL), Linux/VPS, PM2, AWS S3 + CloudFront CDN, Vercel, Render, env/config management
- **Architecture & Security:** HLD/LLD, capacity planning (RPS/throughput), caching strategy, CDN architecture, JWT, session management, RBAC, AES-256-GCM encryption, API hardening
- **Integrations:** Firebase (Auth, FCM), Meta Conversion API, MSG91 (OTP), Amazon Product API, AppTrove, Microsoft Clarity, Sharp (image processing)

Experience

Backend Engineer (Full Stack Developer) – Admobs

Feb 2025 – Present

GlamGuider – consumer beauty-tech platform on Web, Android & iOS (90K+ users · 22K MAU)

Mumbai, India

- Own backend architecture end-to-end; designed and versioned REST APIs consumed by 3 client apps and internal AI tooling – serving **70K+ requests/day at ~70 RPS peak**. (Node.js, Express, TypeScript, MongoDB, Redis)
- Optimized high-traffic endpoints with compound indexes, aggregation-pipeline rewrites, Redis caching, and parallelized I/O (Promise.all) across a **60-collection / 139-index** production database.
- Architected a loyalty wallet system on a transaction ledger with country-specific reward rules – **80K+ user wallets** with auditable reward computation; built a streak & milestone engine on top.
- Migrated infrastructure from a single server to **Dockerized services** on VPS + MongoDB Atlas behind an Nginx reverse proxy, with **GitHub Actions CI/CD** for zero-downtime deploys.
- Moved media delivery to AWS S3 + CloudFront – **1.3M+ CDN requests and 135 GB** served over 2 months at an **87% cache-hit ratio**, offloading **91%** of media bytes from origin; automated image optimization with Sharp.
- Built a review-moderation approval pipeline (**13.7K+ reviews**) with RBAC, audit logs, and bulk workflows; built an admin CMS with **drag-and-drop banners enabling zero-deploy UI updates**.
- Designed affiliate tracking + conversion-attribution and an event-analytics pipeline powering monetization decisions; integrated FCM, Meta Conversion API, MSG91 OTP, Clarity.
- Lead day-to-day execution of the product team – own business logic and API contracts while frontend developers own UI/UX; scope features, assign work, and review peer code across backend, mobile, and AI.

Software Development Engineer – Samisan Tech (Mira3D), Mumbai

Jan 2024 – Jul 2024

- Built industrial calibration software (C#/.NET) integrating Basler camera hardware with ML-assisted measurement capture and real-time encoder/camera logic.
- Developed a Node.js backend for client-admin communication and data handling; automated a manual reporting workflow, cutting manual effort ~80%.

Projects

datamint – self-serve MongoDB reporting SaaS

[Live](#) [Github](#)

(Next.js, Express/TypeScript, PostgreSQL): multi-tenant org/role access control, AES-256-GCM encryption of credentials at rest.

Product Comparison & Intelligence System – GlamGuider (shipped)

[Live](#)

Designed and delivered a queue-driven pipeline (collection → normalization → enrichment → intelligence DB → API) separating heavy offline ingestion from low-latency serving; authored the technical HLD spec.

Enterprise RBAC & Authorization Platform – GlamGuider (in development)

Authorization as configuration, not code – module → page → section → capability hierarchy, department-to-role mapping, deny-by-default middleware, approval workflows with draft/publish lifecycle, audit logging; authored full HLD + LLD.

Education

M.Sc. Computer Science – Ramniranjan Jhunjhunwala College, Mumbai · CGPA 8.92

2021 – 2023

B.Sc. Computer Science – SIES College, Mumbai · CGPA 7.9

2018 – 2021
